Of their 2008 SXSW performance, *liveDaily* wrote, "RadioRadio was dramatic and engaging, as they moved seamlessly through tracks off their full-length debut, "Watch 'Em All Come Runnin'."

"Music fans here are a fickle lot," wrote Jennifer Chancellor of the *Tulsa World*, "but occasionally there are spontaneous moments that overtake audiences. During RadioRadio's set, people suddenly started breaking out cell phone cameras and camcorders, recording the moment . . . it happened in about five seconds — [it didn't take long for] the crowd to decide that it really liked RadioRadio."

Don't miss RadioRadio at the America's Center Sunday night, April 11. Discover Show tickets include a free pass to the show. Tickets are \$10 at the door.

Go to www.radioradioband.com and sign up for our e-mail list to receive a free song download.

RadioRadio share the pop/rock sensibility of bands like The Killers, Snow Patrol, Kaiser Chiefs and David Bowie, but make no mistake — *there is only one RadioRadio!*

RadioRadio has released one full-length studio album, 2006's "Watch 'Em All Come Runnin'," and an EP, "Alarm 1, Alarm 2,"

which came out in the Summer of 2008. "Watch 'Em All Come Runnin'" garnered critical acclaim and found an audience crossing formats from Top 40 to Alternative/Modern Rock commercial radio. The release of "Alarm 1, Alarm 2" led to collaborations with Grammy-nominated engineer Mark Needham (The Killers, Bloc Party, We Are

Scientists) who did a single remix for "BBC," and multi-platinum producer Beau Hill (Alice Cooper, Europe, Ratt) who produced the single for "I, Computer."

RadioRadio is in the process of writing and recording their second studio LP, scheduled for release in 2010.
